SAFETY SYMBOLS

This manual uses the safety symbols below. They denote critical information. Please read them carefully.

	WARNING Failure to abide by the information in a WARNING may result in serious injury and can be life threatening.
	CAUTION Failure to abide by the information in a CAUTION may result in moderate injury and/or property or product damage.
	Indicates a prohibited action.
	Indicates to ground for safety.

Copyright© 2005 EIZO NANA CORPORATION All rights reserved. No part of this manual may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electronic, mechanical, or otherwise, without the prior written permission of EIZO NANA CORPORATION.

EIZO NANA CORPORATION is under no obligation to hold any submitted material or information confidential unless prior arrangements are made pursuant to EIZO NANA CORPORATION's receipt of said information. Although every effort has been made to ensure that this manual provides up-to-date information, please note that EIZO monitor specifications are subject to change without notice.

PRECAUTIONS

IMPORTANT!

- This product has been adjusted specifically for use in the region to which it was originally shipped. If operated outside the region to which it was originally shipped, the product may not perform as stated in the specifications.
- To ensure personal safety and proper maintenance, please read this section and the caution statements on the unit (refer to the figure below).

[Location of the Caution Statements]

WARNING

If the unit begins to emit smoke, smells like something is burning, or makes strange noises, disconnect all power connections immediately and contact your dealer for advice.

Attempting to use a malfunctioning unit may result in fire, electric shock, or equipment damage.

Do not open the cabinet or modify the unit.

Opening the cabinet or modifying the unit may result in fire, electric shock, or burn.

Refer all servicing to qualified service personnel.

Do not attempt to service this product yourself as opening or removing covers may result in fire, electric shock, or equipment damage.

WARNING

Keep small objects or liquids away from the unit.

Small objects accidentally falling through the ventilation slots into the cabinet or spillage into the cabinet may result in fire, electric shock, or equipment damage. If an object or liquid falls/spills into the cabinet, unplug the unit immediately. Have the unit checked by a qualified service engineer before using it again.

Place the unit at the strong and stable place.

A unit placed on an inadequate surface may fall and result in injury or equipment damage.

If the unit falls, disconnect the power immediately and ask your dealer for advice. Do not continue using a damaged unit. Using a damaged unit may result in fire or electric shock.

Set the unit in an appropriate location.

Not doing so may result in fire, electric shock, or equipment damage.

- Do not place outdoors.
 - Do not place in the transportation system (ship, aircraft, trains, automobiles, etc.)
 - Do not place in a dusty or humid environment.
 - Do not place in a location where the steam comes directly on the screen.
 - Do not place near heat generating devices or a humidifier.
-

To avoid danger of suffocation, keep the plastic packing bags away from babies and children.

Use the enclosed power cord and connect to the standard power outlet of your country.

Be sure to remain within the rated voltage of the power cord. Not doing so may result in fire or electric shock.

To disconnect the power cord, grasp the plug firmly and pull.

Tugging on the cord may damage and result in fire or electric shock.

WARNING

The equipment must be connected to a grounded main outlet.

Not doing so may cause in fire or electric shock.

Use the correct voltage.

- The unit is designed for use with a specific voltage only. Connection to another voltage than specified in this User's Manual may cause fire, electric shock, or equipment damage.
 - Do not overload your power circuit, as this may result in fire or electric shock.
-

Handle the power cord with care.

- Do not place the cord underneath the unit or other heavy objects.
- Do not pull on or tie the cord.

If the power cord becomes damaged, stop using it. Use of a damaged cord may result in fire or electric shock.

Never touch the plug and power cord if it begins to thunder.

Touching them may result in electric shock.

When attaching an arm stand, please refer to the user's manual of the arm stand and install the unit securely with the enclosed screws.

Not doing so may cause the unit to come unattached, which may result in injury or equipment damage. When the unit is dropped, please ask your dealer for advice. Do not continue using a damaged unit. Using a damaged unit may result in fire or electric shock. When reattaching the tilt stand, please use the same screws and tighten them securely.

Do not touch a damaged LCD panel directly with bare hands.

The liquid crystal which leaks from the panel is poisonous if it enters the eyes or mouth. If any part of the skin or body comes in direct contact with the panel, please wash thoroughly. If some physical symptoms result, please consult your doctor.

Follow local regulation or laws for safe disposal.

The backlight of the LCD panel contains mercury.

Handle with care when carrying the unit.

Disconnect the power cord and cables when moving the unit. Moving the unit with the cord attached is dangerous. It may result in injury.

When handling the unit, grip the bottom of the unit firmly with both hands ensuring the panel faces outward before lifting.

Dropping the unit may result in injury or equipment damage.

Do not block the ventilation slots on the cabinet.

- Do not place any objects on the ventilation slots.
- Do not install the unit in a closed space.
- Do not use the unit laid down or upside down.

Blocking the ventilation slots prevents proper airflow and may result in fire, electric shock, or equipment damage.

Do not touch the plug with wet hands.

Doing so may result in electrical shock.

Use an easily accessible power outlet.

This will ensure that you can disconnect the power quickly in case of a problem.

Periodically clean the area around the plug.

Dust, water, or oil on the plug may result in fire.

Unplug the unit before cleaning it.

Cleaning the unit while it is plugged into a power outlet may result in electric shock.

If you plan to leave the unit unused for an extended period, disconnect the power cord from the wall socket after turning off the power switch for the safety and the power conservation.

LCD Panel

In order to suppress the luminosity change by long-term use and to maintain the stable luminosity, use of a monitor in lower brightness is recommended.

The screen may have defective pixels. These pixels may appear as slightly light or dark area on the screen. This is due to the characteristics of the panel itself, and not the product.

The backlight of the LCD panel has a fixed life span. When the screen becomes dark or begins to flicker, please contact your dealer.

Do not press on the panel or edge of the frame strongly, as this may result in damage to the screen. There will be prints left on the screen if the pressed image is dark or black. If pressure is repeatedly applied to the screen, it may deteriorate or damage your LCD panel. Leave the screen white to decrease the prints.

When the screen image is changed after displaying the same image for extended periods of time, an afterimage may appear. Use the screen saver or timer to avoid displaying the same image for extended periods of time.

When the monitor is cold and brought into a room or the room temperature goes up quickly, dew condensation may occur inside and outside the monitor. In that case, do not turn the monitor on and wait until dew condensation disappears, otherwise it may cause some damages to it.

Do not scratch or press on the panel with any sharp objects, such as a pencil or pen as this may result in damage to the panel. Do not attempt to brush with tissues as this may scratch the LCD panel.

1. Introduction

Thank you very much for choosing an EIZO Color Monitor.

1-1. Features

- 21" wide format LCD
- Dual inputs compliant (DVI-I x 2)
- [DVI](#) Digital input ([TMDS](#)) compliant
- [Horizontal scanning frequency] Analog: 24 - 82 kHz
Digital: 31 - 65 kHz
[Vertical scanning frequency] Analog: 49 - 86 Hz (1280x1024: 49-76Hz/1680x1050: 49 -61Hz)
Digital: 59 - 61 Hz (VGA text: 69 - 71 Hz)
[Resolution] 1680 dots x 1050 lines
- Frame Synchronous mode supported (59 - 61 Hz)
- [Smoothing function](#) incorporated for the adjustment of an enlarged image
- [FineContrast](#) modes, to select the most suitable mode for screen display
- The utility software "ScreenManager Pro for LCD" (for Windows) which can control the monitor from a PC with a mouse or keyboard is included (refer to the EIZO LCD Utility Disk).
- The ArcSwing Stand enables to adjust the monitor height and monitor angle freely

1-2. Package Contents

Please contact your local dealer for assistance if any of the listed items are missing or damaged.

- LCD Monitor
- Power Cord
- Analog Signal Cable (FD-C16)
- Digital Signal Cable (FD-C39)
- EIZO USB Cable (MD-C93)
- "EIZO LCD Utility Disk" CD-ROM
- User's Manual (in the CD-ROM)
- Setup Guide
- ScreenManager Quick Reference
- LIMITED WARRANTY
- Mounting Screws (M4 x 12 mm, 4 pcs)

NOTE

- Please retain the packing materials for future transference.

1-3. Controls & Connectors

Front

(1) ScreenManager®	Monitor Adjustment menu
(2) FineContrast Menu	Directly touching the left or right button allows you to select a FineContrast mode.
(3) Input Signal Selection Switch (SIGNAL)	Switch the input signals when connecting 2 PCs.
(4) Auto Adjustment Switch (AUTO)	Adjust the screen to appropriate condition automatically (analog input only).
(5) Enter Switch (ENTER)	Show the ScreenManager on the screen. Confirm the setting / adjustment function. Save the adjustment values.
(6) Directing Switch (Left, Down, Up, Right)	Select the desired function. Increase and decrease the adjustment value.
(7) Power Switch	ON or OFF the monitor's power.
(8) Power Indicator	Indicate monitor's operation status. Blue: Operation Flashing blue: Last 15 min. of operation time before entering the power off state . Yellow: Power saving Off: Power off

Rear

Control Panel

(9) Stand (Detachable)	The LCD monitor can be used with an optional arm stand by removing the stand (See "6. ATTACHING AN ARM STAND").
(10) Security Lock Slot	Allows for connection of a security cable. This lock supports Kensington's MicroSaver security system. For further information, please consult: Kensington Technology Group 2855 Campus Drive, San Mateo, CA 94403 USA Tel.: 800-650-4242, x3348, Intl: 650-572-2700, x3348 Fax: 650-572-9675 http://www.kensington.com
(11) Cable Holder	House the cables.
(12) Power Connector	Connect the power cord.
(13) DVI-I Input Connector x 2	Connect the signal cable .
(14) USB Port (1 Upstream)	USB Port upstream is used when using the software EIZO LCD Utility Disk.
(15) USB Port (2 Downstream)	See Making Use of USB Section.

2. CABLE CONNECTION

2-1. Before Connecting

Before connecting your monitor to the PC, change the display screen settings ([Resolution](#) and frequency) in accordance with the charts below.

NOTE

- When your computer and display support VESA DDC, the suitable resolution and the refresh rate are set by just plugging your display into the computer without any manual settings.

Analog Input

Resolution	Frequency	Dot Clock	Remarks
640×480	67Hz	150 MHz (Max)	Apple Macintosh
640×480	~85Hz		VGA, VESA
720×400	70Hz		VGA TEXT
800×600	~85Hz		VESA
832×624	75Hz		Apple Macintosh
1024×768	~85Hz		VESA
1152×864	75Hz		VESA
1152×870	75Hz		Apple Macintosh
1280×960	60Hz		VESA
1280×960	75Hz		Apple Macintosh
1280×1024	~75Hz		VESA
1680×1050	60Hz		VESA CVT, VESA CVT RB (Reduced Blanking)

Digital Input

The monitor supports the following resolutions only.

Resolution	Frequency	Dot Clock	Remarks
640×480	60Hz	120 MHz	VGA
720×400	70Hz		VGA TEXT
800×600	60Hz		VESA

1024×768	60Hz	(Max)	VESA
1280×960	60Hz		VESA
1280×1024	60Hz		VESA
1680×1050	60Hz		VESA CVT RB (Reduced Blanking)

2-2. Connecting the Signal Cable

NOTE

- Be sure that the power switches of both the PC and the monitor are OFF.

1. Plug the signal cable into the connector at the rear of the monitor and the other end of the cable into the video connector on the PC.

After connecting, secure the connection with the screw-in fasteners.

Analog Input

Signal Cable	Connector of the PC	PC
<div>Signal Cable (FD-C16 enclosed)</div> 	Video Output Connector / D-Sub mini 15 pin Input Connector (monitor) / D-Sub mini 15 pin	<ul style="list-style-type: none"> Standard graphics card Power Macintosh G3 (Blue & White) / Power Mac G4 (VGA)

Signal Cable (FD-C16 enclosed) + Macintosh Adapter (Optional) 	Video Output Connector / D-Sub 15 pin Input Connector (monitor) / D-Sub mini 15 pin	<ul style="list-style-type: none"> Macintosh
---	--	---

NOTE

- When using FD-C16, plug the D-Sub mini 15 pin connector to the computer and DVI-I connector to the monitor. Wrong connection causes no picture problem.

Digital Input

Signal Cable	Connector of the PC	PC
Signal Cable (FD-C39 enclosed) 	Video Output Connector / DVI Input Connector (monitor) / DVI	<ul style="list-style-type: none"> Digital Graphics card Power Mac G4/G5 (DVI)

NOTE

- The monitor is not compatible with a Power Mac G4/G5 ADC (Apple Display Connector).

2. Plug the power cord into the power connector on the rear of the monitor.

3. Plug the other end of the power cord into a power outlet.

Use the enclosed power cord and connect to the standard power outlet of your country.

Be sure to remain within the rated voltage of the power cord. Not doing so may result in fire or electric shock.

The equipment must be connected to a grounded main outlet.

Not doing so may result in fire or electric shock.

4. Adjust the "height", "front and back position" and "angle" of the monitor.

Grip both side of the center part of the monitor and move slowly (refer to the right figure.)

(1) Adjust the height of the monitor. To heighten, push the monitor backward. To lower, pull the monitor forward.

(2) Adjust the position and angle of the monitor.

To adjust the angle of the monitor, hold the stand with one hand and tilt the monitor with another hand by holding the upper side of the cabinet.

(3) If necessary, fine adjust the height of the monitor.

5. Turn on the monitor's Power switch and then turn on the PC's power.

The monitor's power indicator will light up (blue).

If an image does not appear, refer to the ["7. TROUBLESHOOTING"](#) for advice.

Whenever finished, turn off the PC and the monitor.

NOTE

- When turning on the monitor, the kind of the input signal (Signal1 or 2/Analog or Digital) is displayed for a few seconds on the right top corner of the screen.
- Adjust brightness of the screen depending on the brightness of your environment. Too dark or too bright of a screen can cause eyestrain.
- Be sure to take adequate rests. A 10-minute rest period each hour is suggested.

6. When using the software, ScreenManager Pro for LCD (for Windows), connect the upstream port of the monitor to the downstream port of the USB compliant PC or another hub with the USB cable.

After connecting the USB cable, the USB function can be set up automatically. For further details about the "ScreenManager Pro for LCD", refer to the readme.txt in the CD-ROM.

2-3. Connecting Two PCs to the Monitor

Two PCs can be connected to the monitor through the DVI-I and the D-Sub mini 15 pin connector on the back of the monitor.

Connecting Examples

			SIGNAL 1		SIGNAL 2	
(Ex.1)	Analog	D-Sub mini 15 pin	Signal Cable (FD-C16 enclosed) 	Signal Cable (FD-C39 enclosed) 	DVI	Digital
(Ex.2)	Analog	D-Sub mini 15 pin	Signal Cable (FD-C16 enclosed) 	Signal Cable (FD-C16 optional) 	D-Sub mini 15 pin	Analog
(Ex.3)	Digital	DVI	Signal Cable (FD-C39 enclosed) 	Signal Cable (FD-C39 optional) 	DVI	Digital

NOTE

- When using FD-C16, plug the D-Sub mini 15 pin connector to the computer and DVI-I connector to the monitor. Wrong connection causes no picture problem.

Selecting the Active Input

The Input Signal Selection switch on the control panel can be used to select either SIGNAL 1 or SIGNAL 2 as the active input at any time. Every time the switch is touched, the input changes. When switching the signal, the kind of the input signal (Signal 1 or 2/ Analog or Digital) is displayed for a few seconds on the right top corner of the screen.

The Priority Input Signal

This function is used to select which PC will have priority to control the monitor when utilizing two PCs. The monitor constantly checks the input signals and switches automatically in accordance with the "Input Priority" setting (see table below). Once a priority is set, whenever a change of signal is detected at the selected input, the monitor will switch the input to that signal.

In the case of only one signal being present at either input, the monitor automatically detects and displays that signal.

Priority setting	Performance
1 (SIGNAL 1 - DVI-I Input Connector)	<p>If signals from both inputs are present, the monitor gives preference to Signal 1 in the following cases.</p> <ul style="list-style-type: none"> • When the power of the monitor is turned ON. • When the signal input to Signal 1 is changed even if active input was Signal 2.
2 (SIGNAL 2 - DVI-I Input Connector)	<p>If signals from both inputs are present, the monitor gives preference to Signal 2 in the following cases.</p> <ul style="list-style-type: none"> • When the power of the monitor is turned ON. • When the signal input to Signal 2 is changed even if active input was Signal 1.
Manual	<p>The monitor will not detect signals automatically in this mode. Select the active input by pressing the Input Signal Selection Button on the monitor's control panel.</p>

NOTE

- When the "1" or "2" is selected, the power saving mode of the monitor activates only if both PCs are in power saving mode.

3. ScreenManager

3-1. How to use the ScreenManager

ScreenManager allows you to adjust screen performance though the main menu and select a FineContrast mode easily.

NOTE

- Main Menu and FineContrast Menu cannot be activated at the same time.

1. Entering the ScreenManager

Touch the Enter switch once to display the main menu of the ScreenManager.

2. Making Adjustments and Settings

1. Select the desired sub menu icon using the Directing switch and touch the Enter switch. The sub menu appears.
2. Use the Directing switches to select the desired setting icon and touch the Enter switch. The setting menu appears.
3. Use the Directing switches to make all required adjustments and touch the Enter switch to save the settings.

3. Exiting the ScreenManager

1. To return to the main menu, select the <Return> icon or touch the Down switch twice, followed by the Enter switch.
2. To exit the ScreenManager, select <Exit> icon or touch the Down switch twice, followed by the Enter switch.

NOTE

- Double clicking the Enter switch at any time also exits the ScreenManager menu.

FineContrast Menu

Directly touching the left or right switch allows you to select the best suited mode for screen display from 5 FineContrast modes; Custom, Movie, Picture, Text and sRGB. To exit the menu, touch the Enter switch.

3-2. ScreenManager Adjustments and Settings

The following table shows all the ScreenManager's adjustment and setting menus.

"*" indicates adjustments of analog input only and "***" indicates digital input only.

Main menu	Sub menu		Reference
Screen	Clock	*	4-1. Screen Adjustment.
	Phase	*	
	Position	*	
	Resolution	*	
	Range Adjustment	*	
	Smoothing		
	Signal Filter	*	
Color (Custom) ^{*1} ₋	Brightness		4-3. Color Adjustment.
	Temperature		
	Gamma		
	Saturation		
	Hue		
	Gain		
	6 Colors		
	Reset		
Power Manager	DVI DMPM	***	4-4. Power-save Setup.
	VESA DPMS	*	
Others	Screen Size		4-2. Displaying Lower Resolutions.
	Border Intensity		
	Input Priority		Select the Priority Input Signal .
	Off Timer		Set the monitor's Off Timer to on or off.
	Beep		Set the monitor's beeper to on or off. (Beeper settings.)
		Menu Size	Change the size of the menu.
		Menu Position	Adjust the menu position.

	Menu Settings	Menu Off Timer	Set the menu displaying time.
		Translucent	Set the transparency of the background.
	Power Indicator		Make non-light for blue lighting when the screen is displayed. (Power Indicator Setting.)
	Reset		Return to the factory Default settings.
Information	Information		Review the ScreenManager's settings, model name, serial number and usage time. * 2
Language	English, German, French, Spanish, Italian, Swedish and Japanese		Select the ScreenManager's language.

*1 The adjustable functions on the <Color> menu depend on the selected FineContrast mode. The above table shows the sub menus when the "Custom" mode is selected ([See "4-3. Color Adjustment."](#)).

*2 Due to the inspection on the factory, the usage time may not "0 hour" at shipping.

3-3. FineContrast

This function allows you to select the best suited mode for screen display.

To select the Mode

Touching the Left or Right switch allows you to select the best suited mode for screen display from 5 FineContrast modes;; Custom, Movie, Picture, Text and sRGB. Color settings each mode can be adjusted by using the <Color> menu of the ScreenManager.

NOTE

- When the main menu of ScreenManager is displayed on the screen, the FineContrast Menu cannot be activated.

Exit

Press the Enter switch to exit the menu.

FineContrast Mode

Selectable FineContrast modes are as follows.

Custom	To adjust the color settings according to your preference
Movie	Animated images
Picture	Photo or picture image
Text	Text on word processor or spreadsheet software
sRGB	To display the screen images based on those original colors (ex. over the Internet)

Color Adjustment of the Mode Settings

<Brightness>, <Temperature> and <Gamma> settings can be adjusted on the FineContrast menu. Select the desired function icon with the Up/Down Directing switches and adjust with the Left/Right Directing switches. (Setting(s) of <Temperature> and/or <Gamma> is defined as standard default in some modes. (["4-3. Color Adjustment."](#))

Detailed Adjustments

The detailed color settings of each mode can be adjusted by using the <Color> menu of the ScreenManager. (["4-3. Color Adjustment."](#))

3-4. Useful Functions

Adjustment Lock

Use the "Adjustment Lock" function to prevent any accidental changes.

Locked function	<ul style="list-style-type: none"> Adjustments and settings in the ScreenManager Auto Adjustment Switch
Unlocked function	<ul style="list-style-type: none"> Selecting of the FineContrast mode by the Directing Switch / Adjustments Brightness adjustment by the Directing Switch Input signal selection switch

[How To lock]

1. Turn off the monitor's power by touching the power switch.
2. And then touch the power switch while touching the Auto Adjustment switch.

[How To unlock]

1. Turn off the monitor's power by touching the power switch.
2. And then touch the power switch while touching the Auto Adjustment switch once again.

Off Timer

The off timer function causes the monitor to automatically enter a power off state after a predetermined amount of time has lapsed. This function was created to reduce Afterimage characteristics that are particular to LCD monitors when the monitor screen is left on for a long period without use.

[Procedure]

1. Select <Off Timer> in the ScreenManager <Others> menu.
2. Select "Enable" and touch the Right and Left switches to adjust the "On Period" (1 to 23 hours).

[Off Timer System]

PC	Monitor	Power Indicator
On Period (1H - 23H)	Operation	Blue
Last 15 min. in "On period"	Advance Notice* 1 -	Blue Flashing
"On period" expired	Power Off	Off

*1 Advance notice will be given 15 minutes before the monitor automatically enters the "Power Off" mode. To delay entering the "Power Off" mode, touch the power switch during the advance notice period. The monitor will continue to operate for an additional 90 minutes.

[Power Resumption Procedure]

Touch the power switch to return a normal screen.

NOTE

- The off timer function works while the PowerManager is active, but there is no advance notice before the monitor's power is turned off.

Power Indicator Setting

Light off the power indicator. This function is available for the multiple panels settings.

[Procedure]

1. Select <Power Indicator> in the ScreenManager <Others> menu.
2. Select "Disable".

EIZO Logo Appearing Function

When turning on the monitor, the EIZO logo is displayed for a while. If you desire to display or undisplay this logo, use this function. (Default is logo appearing.)

[To undisplay]

1. Turn off the monitor's power by touching the power switch.
2. touch the power switch while touching the Enter switch, and this logo is not displayed.

[To display]

1. Turn off the monitor's power by touching the power switch.
2. touch the power switch while touching the Enter switch, and this logo is not displayed again.

4. ADJUSTMENT

4-1. Screen Adjustment

NOTE

- Allow the LCD monitor to stabilize for at least 20 minutes before making image adjustments.

The monitor displays the digital input image correctly based on its pre-setting data.

Analog Input

Screen adjustments for the LCD monitor should be used in suppressing screen flickering and also for adjusting the screen to its proper position. There is only one correct position for each display mode. It is also recommended to use the ScreenManager function when first installing the display or whenever changing the system. For convenience, an easy set-up Program installed on the utility disk to assist in the set-up procedure is provided.

Adjustment Procedure

1. Touch the Auto Adjustment Switch on the control panel.

The message appears and remains on the screen for 5 seconds. While the message is on the screen, touch the Auto Adjustment switch again to automatically adjust the clock, phase, screen position and resolution. If you do not wish to do adjust the screen, do not touch the Auto Adjustment switch again.

NOTE

- The Auto adjustment function is intended for use on the Macintosh and on AT-compatible PC running Windows. It may not work properly in either of the following cases.
When running an AT-compatible PC on MS-DOS (Not windows). The background color for the "wall paper" or "desktop" pattern is set to black.

If the appropriate screen cannot be made by using the Auto Adjustment switch, adjust the screen through the following procedures. If the appropriate screen can be made, proceed to [4. Range Adjustment](#).

2. Run the "Screen Adjustment Program".

Having read the "Readme.txt" file, run the "Screen Adjustment Program" in the enclosed EIZO LCD Utility Disk. Step by step, adjustment is provided by the wizard guide. (If using the Windows, the program can be directly run from the menu screen of the CD-ROM.)

NOTE

- If the user's operating system has no utility disk (e.g. OS/2), we recommend setting the desktop

pattern to that as shown in the diagram on the following.

3. Adjust by using <Screen> menu in the ScreenManager.

(1) Vertical bars appear on the screen

→  Use the <[Clock](#)> adjustment.

Select the <Clock> and eliminate the vertical bars by using the Right and Left of the Directing switches.

Do not continuously touch the Directing switches, as the adjustment value will change quickly and make it difficult to locate the most suitable adjustment point.

If the horizontal flickering, blur or bars appear, proceed to <Phase> adjustment as follows.

(2) Horizontal flickering, blurring or bars appear on the screen.

→  Use the <[Phase](#)> adjustment.

Select the <Phase> and eliminate the horizontal flickering, blurring or bars by using the Right and Left switches.

NOTE

- Horizontal bars may not completely disappear from the screen depending on the PC.

(3) The screen position is incorrect.

→  Use the <Position> adjustment.

The correct displayed position of the monitor is decided because the number and the position of the

pixels are fixed. The <Position> adjustment moves the image to the correct position.

Select <Position> and adjust the position by using the Up, Down, Right and Left switches.

If vertical bars of distortion appear after finishing the <Position> adjustment, return to <Clock> adjustment and repeat the previously explained adjustment procedure. ("Clock" → "Phase" → "Position")

(4) Screen image is smaller or larger than the actual screen images.

→  Use the <Resolution> adjustment.

Adjustment is needed when the input signal resolution and the resolution now being displayed are different.

Select <Resolution> and confirm if the resolution now being displayed is the same as the input resolution. If it is not, adjust the vertical resolution using the Up and Down switches and adjust the horizontal resolution using the Right and Left switches.

4. Adjust the output signal range (Dynamic Range) of the signal.

→  Use the <[Range Adjustment](#)> of <Screen> menu.

This controls the level of output signal range to display the whole color gradation (256 colors).

[Procedure]

Select the <Range Adjustment> in the ScreenManager and touch the Auto Adjustment switch on the control panel to adjust the Range Adjustment.

The screen blanks for a moment and adjusts the color range to display the whole color gradation of the current output signal.

4-2. Displaying Lower Resolutions

The lower resolutions are enlarged to full screen automatically. Using the <Screen Size> function in the <Others> menu enables to change the screen size.

1. Enlarge the screen size when displaying a low resolution.

→  Select the <Screen Size>.

Select the <Screen Size> in the others menu and select the screen size by using the up and down switches.

Menu	Function
Full	Displays the picture on the screen in full, irrespective of the picture's resolution. Since the vertical resolution and the horizontal resolution are enlarged at different rates, some images may appear distorted.
Enlarged	Displays the picture on the screen in full, irrespective of the picture's resolution. Since the vertical resolution and horizontal resolution are enlarged at same rates, some horizontal or vertical image may disappear.
Normal	Displays the picture at the actual Screen resolution.

Example: Displaying 1280 x 1024

2. Smooth the blurred texts of the enlarged screen.

→  Switch the <Smoothing> setting.

Select the suitable level from 1 - 5 (Soft - Sharp).
Select <Smoothing> in the <Screen> menu and adjust by using the right and left switches.

NOTE

- <Smoothing> is disabled when the screen is displayed in the following resolutions.
 - *1680 x 1050 resolution
 - *"Normal" is selected in <Screen Size> .

3. Set the brightness of the black area surrounding the displayed image.

→  Set the <Border Intensity>.

In the <Enlarge> mode or <Full Screen> mode, the outer area (border) is usually black. Select <Border Intensity> in the <Others> menu and adjust by using the right and left switches.

4-3. Color Adjustment

Color settings of each FineContrast mode can be adjusted and saved by using the <Color> menu of the ScreenManager.

In the analog input, perform the "[Range Adjustment](#)" before making the color adjustments.

During color adjustments, the FineContrast mode cannot be changed. Select the mode in advance by using the FineContrast Mode.

Adjustment Items

The adjustable items and displayed icons on the <Color> menu depend on the selected FineContrast mode.

" * ": Settable/Adjustable " - ": Fixed at the factory

Icons	Functions	FineContrast Modes					
			Custom	Movie	Picture	Text	sRGB
	Brightness	*	*	*	*	*	*
	Temperature	*	*	*	*	*	-
	Gamma	*	*	-	-	*	-
	Saturation		*	*	*	*	-
	Hue		*	*	*	*	-
	Gain		*	-	-	-	-
	6 colors		*	-	-	-	-
	Reset		*	*	*	*	-

* These settings can be also adjusted on the FineContrast menu. ([See FineContrast.](#))

NOTE

- Allow the LCD monitor to stabilize for at least 20 minutes before making image adjustments. (Allow the monitor to warm up for at least 20 minutes before making adjustments.)

- Performing the <Reset> of the <Color> menu returns the color settings of the selected mode to the default settings.
- The values shown in percentages represent the current level within the specific adjustment. They are available only as a reference tool. (To create a uniform white or black screen, the percentages for each will probably not be the same.)

Adjustment Contents

Menu	Function Descriptions	Adjustable range
Brightness 	To set the brightness of the screen	0 ~ 100 %
	NOTE <ul style="list-style-type: none"> • Directly touching the Up and Down switches also adjusts the brightness. Touch the Enter switch to save and exit the settings after the adjustment. 	
Temperature 	To set the color temperature	4,000 ~ 10,000 K in 500 K increments (including 9,300 K). Default setting is off (normal white).
	NOTE <ul style="list-style-type: none"> • The values shown in the Kelvin are available only as a reference tool. • Setting the temperature under 4,000 K or over 10,000 K invalidates the color temperature setting. (The color temperature's setting turns "OFF".) • Setting the <Gain> invalidates the <Temperature> adjustment. <Temperature> setting returns to the default. 	
Gamma 	To set the gamma value	1.4 ~ 3.0
	NOTE <ul style="list-style-type: none"> • If setting the gamma value, the using the monitor in the digital signal input is recommended. If using the monitor in the analog input signal, set the gamma value from 1.8 to 2.2. 	
Saturation 	To change the saturation	-100 ~ 100 Setting the minimum level (-100) turns the image to the monochrome.
	NOTE <ul style="list-style-type: none"> • The <Saturation> adjustment may cause undisplayable color tone. 	
Hue 	To change the flesh color, etc.	-100 ~ 100
	NOTE <ul style="list-style-type: none"> • Using <Hue> adjustment may not obtain proper tone reproduction. 	

Gain 	To change each color (red, green and blue)	0 ~ 100% By adjusting the red, green and blue color tones for each mode, custom colors can be defined. Display a white or gray background image and adjust the <Gain>.
	<div>NOTE</div> <ul style="list-style-type: none"> The values shown in the percentage are available only as a reference tool. Setting the <Temperature> invalidates the <Gain> adjustment. <Gain> setting returns to the default. 	
6 colors 	To adjust <Saturation> and <Hue> in each color (Red, Yellow, Green, Cyan, Blue and Magenta)	Hue: -100 ~ 100 Saturation: -100 ~ 100
Reset 	To return the color settings of the selected mode to the default settings	Select the <Reset>.

4-4. Power-save Setup

The <PowerManager> menu in the ScreenManager enables to set the power-save setup.

NOTE

- Do your part to conserve energy, turn off the monitor when you are finished using it. Disconnecting the monitor from the power supply is recommended to save energy completely.
- Even if the monitor is in a power saving mode, USB compliant devices function when they are connected to the monitor's USB (both the upstream and the downstream ports). Therefore, power consumption of the monitor will change according to the connected devices even if the monitor is in a power saving mode.

Analog Input

This monitor complies with the ["VESA DPMS"](#) standard and adopts a power saving method.

[Procedure]

- Set the PC's power saving settings.
- Select "VESA DPMS" from the <PowerManager> menu.

[Power Saving System]

PC		Monitor	Power Indicator
Operation		Operation	Blue
Power saving	STAND-BY SUSPEND OFF	Power saving	Yellow

[Power Resumption Procedure]

Operate the mouse or keyboard to return to a normal screen.

Digital Input

This monitor complies with the ["DVI DMPM"](#)

[Procedure]

- 1. Set the PC's power saving settings.
- 2. Select "DVI DMPM" from the <PowerManager> menu.

[Power Saving System]

PC	Monitor	Power Indicator
Operation	Operation	Blue
Power saving	Power saving	Yellow

[Power Resumption Procedure]

Operate the mouse or keyboard to return to a normal screen.

5. MAKING USE OF USB (Universal Serial Bus)

This monitor provides a hub which supports the USB standard. When connecting to a USB compliant PC or another hub, the monitor functions as a hub to which the USB compliant peripherals can be easily connected.

Required system environment

- PC equipped with USB ports or another USB hub connected to the USB compliant PC
- Windows 98/2000/Me/XP // Mac OS 8.5.1 or later
- USB Cable (MD-C93, enclosed)

NOTE

- The USB hub function may not work properly depending on the PC or peripherals. Please consult the manufacturer of each device about the USB support.
- Using the USB Rev. 2.0 compatible PC or peripherals is recommended.
- When the monitor is not on, the peripherals connected to the downstream ports will not operate.
- Even if the monitor is in a power saving mode, the devices connected to the monitor's USB ports (both the upstream and the downstream) will function.
- The followings are procedures for the Windows 98/Me/2000/XP and Mac OS.

Connecting to the USB HUB

1. Connect the monitor to the PC with the signal cable first, then turn on the PC.
2. Connect the upstream port of the monitor to the downstream port of the USB compliant PC or another hub by using the USB cable.

After connecting the USB cable, the USB function can be set up automatically.

3. After setting up, the monitor's USB hub is available for connecting USB compliant peripherals to the downstream ports of the monitor.

Connecting Examples

ScreenManager Pro for LCD (for Windows)

For further details about the "ScreenManager Pro for LCD (for Windows)", refer to the EIZO LCD Utility Disk.

6. ATTACHING AN ARM

The LCD monitor can be used with an arm by removing the tilt stand and attaching the arm stand to the LCD monitor.

NOTE

- If you will use the arm or stand of other manufacturers, confirm the followings to the manufacturers before selecting.
 - Hole spacing on the arm mounting: 100 mm x 100 mm (VESA compliant)
 - Supportable Weight: Total weight of the monitor (without stand) and attaching equipment such as a cable
 - TÜV/GS approved arm or stand
- Please connect cables after attaching an arm stand.

Setup Procedure

1. Lay the LCD monitor down. Do not scratch the panel.
2. Remove the tilt stand by loosening the screws (4 pcs of M4 x 14).
3. Attach an arm stand to the LCD monitor securely.

4 Mounting Screws (enclosed): M4 x 12 mm

7. TROUBLESHOOTING

If a problem persists even after applying the suggested remedies, contact an EIZO dealer.

- No picture problems → See No.1 ~ No.2
- Imaging problems → See No.3 ~ No.14
- Other problems → See No.15 ~ No.19
- USB problems → See No.20 ~ No.21

Problems	Points to check with Possible Solutions
1. No picture <ul style="list-style-type: none"> • Indicator status: Off 	<ul style="list-style-type: none"> • Check that the power cord is correctly connected. If the problem persists, turn off the monitor power for a few minutes, then turn it back on and try again. • Try touching the Power switch.
<ul style="list-style-type: none"> • Indicator status: Blue 	<ul style="list-style-type: none"> • Check the "Brightness" setting.
<ul style="list-style-type: none"> • Indicator status: Yellow 	<ul style="list-style-type: none"> • Switch the signal input by pressing the Input Signal Selection switch on the front control panel. • Try touching a key on the keyboard, or clicking the mouse.
2. Error messages shown below will remain on the screen for 40 seconds. 	<p>These messages appear when the signal is not inputted correctly, even if the monitor functions properly.</p> <ul style="list-style-type: none"> • When the image is displayed correctly after a short time, there is no problem with the monitor. (Some PCs do not output the signal soon after powering on.) • Check that the PC is turned ON. • Check that the signal cable is properly connected to the PC or graphics board. • Switch the signal input by touching the Input Signal Selection switch on the control

	panel.
<ul style="list-style-type: none"> Whenever an error signal message appears, the signal frequency will be displayed in red. (Example) 	<ul style="list-style-type: none"> Use the graphics board's utility software to change the frequency setting. (Refer to the manual of the graphics board.)
<p>3. Display position is incorrect.</p> 	<ul style="list-style-type: none"> Adjust the image position using the Position . If the problem persists, use the graphics board's utility software to change the display position if available.
<p>4. Screen image is smaller or larger than the actual screen images.</p>	<ul style="list-style-type: none"> Adjust the resolution using the Resolution.
<p>5. Vertical bars of distortion appear.</p> 	<ul style="list-style-type: none"> Decrease the vertical bars using the Clock .
<p>6. The characters and images have several vertical bars on their right side.</p> 	<ul style="list-style-type: none"> If using the monitor in the analog input signal, try setting the Gamma value from 1.8 to 2.2.
<p>7. Horizontal bars of distortion appear.</p> 	<ul style="list-style-type: none"> Decrease the horizontal bars using the Phase.
<p>8. Letters and lines appear blurred.</p>	<ul style="list-style-type: none"> Adjust the blurred lines using Smoothing.
<p>9. Distortion appears like the figure below.</p> 	<ul style="list-style-type: none"> This happens when both composite (X-OR) input signal and separate vertical synchronizing signal are input. Please select one of the two.

<p>10. The screen is too bright or too dark.</p>	<ul style="list-style-type: none"> • Adjust the <Brightness>. (The backlight of the LCD monitor has a fixed life span. When the screen becomes dark or begins to flicker, please contact your dealer.)
<p>11. Afterimages appear.</p>	<ul style="list-style-type: none"> • Do you use the screen saver or timer when displaying the same image for extended periods of time? • Afterimages are particular to LCD monitors. Avoid displaying the same image for extended periods of time.
<p>12. The screen has defective pixels (e.g. slightly light or dark).</p>	<ul style="list-style-type: none"> • This is due to the characteristics of the panel itself, and not the LCD product.
<p>13. Fingerprints remain on the screen.</p>	<ul style="list-style-type: none"> • Leaving the screen white may solve the problem.
<p>14. The noise appears on the screen.</p>	<ul style="list-style-type: none"> • Change the mode in <Signal Filter> in the <Screen> menu.
<p>15. The <Smoothing> cannot be selected.</p>	<ul style="list-style-type: none"> • <Smoothing> is disabled when the screen is displayed in the 1680 x1050. • <Smoothing> is disabled when "Normal" is selected in <Screen Size>.
<p>16. The Main menu of ScreenManager does not operate.</p>	<ul style="list-style-type: none"> • Check that there is nothing left on the face of Enter switch. Wipe the control panel, and then touch the Enter switch again with dry finger. • The adjustment lock is probably on. To unlock: turn the LCD monitor off. Then, while touching the Auto Adjustment switch, turn the power on. • Check that the FineContrast mode is not activated
<p>17. The FineContrast mode does not operate.</p>	<ul style="list-style-type: none"> • Check that the Main menu of ScreenManager is not activated.)

<p>18. The Auto adjustment switch does not operate.</p>	<ul style="list-style-type: none"> ● Check that there is nothing left on the face of Auto Adjustment switch. Wipe the control panel, and then touch the Auto Adjustment switch again with dry finger. ● The adjustment lock is probably on. To unlock: turn the LCD monitor off. Then, while touching the Auto Adjustment Switch, turn the power on.
<p>19. Frequency does not change after installing "Monitor information file" in the attached utility disk on Windows 98/2000/Me/XP.</p>	<ul style="list-style-type: none"> ● Use the graphics board's utility software to change the input signal frequency.
<p>20. PC is hung up. / The peripherals connected to the downstream ports do not operate.</p>	<ul style="list-style-type: none"> ● Check that the USB cable is correctly connected. ● Check the downstream ports by connecting the peripherals to other downstream ports. If the problem is solved by doing this, contact an EIZO dealer. (For details, refer to the manual of the PC.) ● Try executing the following method. <ul style="list-style-type: none"> ● Restarting the PC ● Connecting the PC and peripherals directly <p>If the problem is solved by doing this, contact an EIZO dealer.</p>
<p>21. USB function cannot be setup.</p>	<ul style="list-style-type: none"> ● Check that the USB cable is correctly connected. ● Check that the PC and OS are USB compliant. (For verification of USB support, consult the manufacturer of each system.) ● Check the PC's BIOS setting for USB. (For details, refer to the manual of the PC.)

8. CLEANING

Periodic cleaning is recommended to keep the monitor looking new and to prolong its operation lifetime.

NOTE

- Never use thinner, benzene, alcohol (ethanol, methanol, or isopropyl alcohol), abrasive cleaners, or other strong solvents, as these may cause damage to the cabinet or LCD panel.

Cabinet

To remove stains, wipe the cabinet with a soft, lightly moistened cloth using a mild detergent. Do not spray wax or cleaner directly into the cabinet. (For details, refer to the manual of the PC.)

LCD Panel

- The LCD surface can be cleaned with a soft cloth, such as cotton or lens paper.
- If necessary, stubborn stains can be removed by moistening part of a cloth with water to enhance its cleaning power.

9. SPECIFICATIONS

LCD Panel		53 cm (21.1 inch), TFT color LCD panel with Anti-Glare Hard Coating, Viewing Angle: Horizontal: 178°, Vertical: 178° CR ≥ 10
Dot Pitch		0.270 mm
Horizontal Scan Frequency	Analog	24 ~ 82 kHz (Automatic)
	Digital	31 ~ 65 kHz
Vertical Scan Frequency	Analog	49 ~ 86 Hz (Automatic) (1280 x 1024: 49 ~ 76 Hz / 1680 x 1050: 49 ~ 61 Hz)
	Digital	59 ~ 61 Hz (VGA TEXT: 69 ~ 71 Hz)
Resolution		1680 dots x 1050 lines
Dot Clock (Max.)	Analog	150 MHz
	Digital	120 MHz
Display Colors		16 million colors (max)
Display Area		453.6 mm (H) x 283.5 mm (V) (17. 9" (H) x 11.2" (V))
Power Supply		100-120/200-240 VAC±10%, 50/60 Hz, 0.8/0.45 A
Power Consumption		Max.: 80 W (with USB) Max (Normal): 70W (without USB) Power Saving Mode: Less than 2 W (for single signal input without USB)
Input Connector		DVI-I x 2
Analog Input Signal (Sync)		a) Separate, TTL, Positive/Negative
		b) Composite, TTL, Positive/Negative
Analog Input Signal (Video)		0.7 Vp-p / 75 ohms, Positive
Input Signal (Digital)		TMDS (Single Link)
Signal registration	Analog	45 (Factory preset: 24)
	Digital	10 (Factory preset: 0)
Plug & Play		VESA DDC 2B
Dimensions	with stand	501 mm (W) x 341.1~ 459.5 mm (H) x 230 mm (D) (19.7"(W) x 13.4" ~ 18.1" (H) x 9.1"(D))
	without stand	501mm (W) x 355 mm (H) x 85 mm (D) (19.7"(W) x 14.0"(H) x 3.35"(D))
Weight	with stand	8.2 kg (18.1 lbs.)
	without stand	5.8 kg (12.8 lbs.)

Temperature		Operating: 0°C ~ 35°C (32°F ~ 95°F) Storage: -20°C ~ 60°C (-4°F ~ 140°F) Humidity 30% to 80% R.H. Non-condensing
USB	standard	Rev. 2.0 complied self-powered hub
	USB port	Upstream port x 1 Downstream port x 2
	Communication Speed	480 Mbps (high), 12 Mbps (full), 1.5 Mbps (low)
	Power Supply	Downstream: 500 mA for each (max.)
Certifications and Standards	100-120 VAC	NRTL/C-TÜV, FCC-B, TCO'03 ^{*1} , TCO'99 ^{*2} , EPA ENERGY STAR Program, TÜV/Rheinland Ergonomics Approved

10. GLOSSARY

Clock

With the analog input signal display, the analog signal is converted to a digital signal by the LCD circuitry. To convert the signal correctly, the LCD monitor needs to produce the same number clock pulse as the dot clock of the graphics system. When the clock pulse is not correctly set, some vertical bars of distortion are displayed on the screen.

DVI

(Digital Visual Interface)

A digital flat panel interface. DVI can transmit digital data from the PC directly without loss with the signal transition method "TMDS".

There are two kinds of DVI connectors. One is DVI-D connector for digital signal input only. The other is DVI-I connector for both digital and analog signal inputs.

DVI DMPM

(DVI Digital Monitor Power Management)

The Power management system for the digital interface. The "Monitor ON" status (operation mode) and the "Active Off" status (power-saving mode) are indispensable for the DVI-DMPM as the monitor's power mode.

Gain Adjustment

Adjusts each color parameter for red, green and blue. The color of the LCD monitor is displayed through the color filter of the LCD panel. Red, green and blue are the three primary colors. The colors on the monitor are displayed by combining these three colors. The color tone can change by adjusting the illumination amount passed through each color's filter.

Gamma

Generally, the relationship that the light intensity values of a monitor change nonlinearly to the input signal level is called "Gamma Characteristic". On the monitor, low gamma values display the whitish images and high gamma values display the high contrast images.

Phase

The phase adjustment decides the sampling timing point for converting the analog input signal to a digital signal. Adjusting the phase after the clock adjustment will produce a clear screen.

Range Adjustment

The Range Adjustment controls the level of output signal range to display the whole color gradation.

Resolution

The LCD panel consists of a fixed number of pixel elements which are illuminated to form the screen image. This model display panel consists of 1600 horizontal pixels and 1200 vertical pixels. At a resolution of 1600 x 1200, all pixels are displayed as a full screen.

sRGB

(Standard RGB)

"International Standard for Red, Green, and Blue color space"

A color space was defined with the aim of the color matching between applications and hardware devices, such as monitors, scanners, printers and digital cameras. As a standard default space, sRGB allows Internet users to closely match colors.

Temperature

Color Temperature is a method to measure the white color tone, generally indicated in degrees Kelvin. At high temperatures the white tone appears somewhat blue, while at lower temperatures it appears somewhat red. Computer monitors generally give best performance at high temperature settings.

5,000 K: Slightly reddish white.

6,500 K: Warm-white tone, similar to white paper or daylight.

9,300 K: Slightly bluish white.

TMDS

(Transition Minimized Differential Signaling)

A signal transition method for the digital interface.

VESA DPMS

(Video Electronics Standards Association - Display Power Management Signaling)

The acronym VESA stands for "Video Electronics Standards Association", and DPMS stands for "Display Power Management Signaling". DPMS is a communication standard that PCs and graphics boards use to implement power savings on the monitor side.

APPENDIX/ANHANG/ANNEXE

Preset Timing Chart for Analog input Timing-Übersichten für Analog Eingang Synchronisation des Signaux pour Analog numerique

Based on the signal diagram shown below 24 factory presets have been registered in the monitor's microprocessor.

Der integrierte Mikroprozessor des Monitors unterstützt 24 werkseitige Standardeinstellungen (siehe hierzu die nachfolgenden Diagramme).

24 signaux ont été enregistrés en usine dans le microprocesseur du moniteur, conformément au diagramme de synchronisation ci-dessous.

Mode	Dot Clock MHz	Sync Polarity		Frequencies	
		H	V	H kHz	V Hz
VGA 640 × 480 @ 60 Hz	25.2	Nega.	Nega.	31.47	59.94

[Applicable to white cabinet version only.]

Congratulations!

The display you have just purchased carries the TCO'03 Displays label. This means that your display is designed, manufactured and tested according to some of the strictest quality and environmental requirements in the world. This makes for a high performance product, designed with the user in focus that also minimizes the Impact on our natural environment.

Some of the features of the TCO'03 Display requirements:

Ergonomics

- Good visual ergonomics and image quality in order to improve the working environment for the user and to reduce sight and strain problems. Important parameters are luminance, contrast, resolution, reflectance, colour rendition and image stability.

Energy

- Energy-saving mode after a certain time - beneficial both for the user and environment
- Electrical safety
- Emissions
 - Electromagnetic fields
- Noise emissions

Ecology

- The products must be prepared for recycling and the manufacturer must have a certified environmental management system such as EMAS or ISO 14000
- Restrictions on
 - chlorinated and brominated flame retardants and polymers
 - heavy metals such as cadmium, mercury and lead.

The requirements included in this label have been developed by TCO Development in co-operation with scientists, experts, users as well as manufacturers all over the world. Since the end of the 1980s TCO has been involved in influencing the development of IT equipment in a more user-friendly direction. Our labeling system with displays in 1992 and is now requested by users and IT-manufacturers all over the world.

[Applicable to black cabinet version only.]

Congratulations!

You have just purchased a TCO'99 approved and labelled product! Your choice has provided you with a product developed for professional use. Your purchase has also contributed to reducing the burden on the environment and also to the further development of environmentally adapted electronics products.

Why do we have environmentally labelled computers?

In many countries, environmental labelling has become an established method for encouraging the adaptation of goods and services to the environment. The main problem, as far as computers and other electronics equipment are concerned, is that environmentally harmful substances are used both in the products and during their manufacture. Since it is not so far possible to satisfactorily recycle the majority of electronics equipment, most of these potentially damaging substances sooner or later enter nature.

There are also other characteristics of a computer, such as energy consumption levels, that are important from the viewpoints of both the work (internal) and natural (external) environments. Since all methods of electricity generation have a negative effect on the environment (e.g. acidic and climate-influencing emissions, radioactive waste), it is vital to save energy. Electronics equipment in offices is often left running continuously and thereby consumes a lot of energy.

What does labelling involve?

This product meets the requirements for the TCO'99 scheme which provides for international and environmental labelling of personal computers. The labelling scheme was developed as a joint effort by the TCO (The Swedish Confederation of Professional Employees), Svenska Naturskyddsforeningen (The Swedish Society for Nature Conservation) and Statens Energimyndighet (The Swedish National Energy Administration).

Approval requirements cover a wide range of issues: environment, ergonomics, usability, emission of electric and magnetic fields, energy consumption and electrical and fire safety.

The environmental demands impose restrictions on the presence and use of heavy metals, brominated and chlorinated flame retardants, CFCs (freons) and chlorinated solvents, among other things. The product must be prepared for recycling and the manufacturer is obliged to have an environmental policy which must be adhered to in each country where the company implements its operational policy.

The energy requirements include a demand that the computer and/or display, after a certain period of inactivity, shall reduce its power consumption to a lower level in one or more stages. The length of time to reactivate the computer shall be reasonable for the user.

Labelled products must meet strict environmental demands, for example, in respect of the reduction of electric and magnetic fields, physical and visual ergonomics and good usability.

You will find a brief summary of the environmental requirements met by this product on the right. The complete environmental criteria document may be ordered from:

TCO Development

Environmental Requirements

Flame retardants

Flame retardants are present in printed circuit boards, cables, wires, casings and housings. Their purpose is to prevent, or at least to delay the spread of fire. Up to 30% of the plastic in a computer casing can consist of flame retardant substances. Most flame retardants contain bromine or chloride, and those flame retardants are chemically related to another group of environmental toxins, PCBs. Both the flame retardants containing bromine or chloride and the PCBs are suspected of giving rise to severe health effects, including reproductive damage in fish-eating birds and mammals, due to the bio-accumulative* processes. Flame retardants have been found in human blood and researchers fear that disturbances in foetus development may occur.

The relevant TCO'99 demand requires that plastic components weighing more than 25 grams must not contain flame retardants with organically bound bromine or chlorine. Flame retardants are allowed in the printed circuit boards since no substitutes are available.

Cadmium**

Cadmium is present in rechargeable batteries and in the colour-generating layers of certain computer displays. Cadmium damages the nervous system and is toxic in high doses.

The relevant TCO'99 requirement states that batteries, the colour-generating layers of display screens and the electrical or electronics components must not contain any cadmium.

Mercury**

Mercury is sometimes found in batteries, relays and switches. It damages the nervous system and is toxic in high doses.

The relevant TCO'99 requirement states that batteries may not contain any mercury. It also demands that mercury is not present in any of the electrical or electronics components associated with the labelled unit.

CFCs (freons)

The relevant TCO'99 requirement states that neither CFCs nor HCFCs may be used during the manufacture and assembly of the product. CFCs (freons) are sometimes used for washing printed circuit boards. CFCs break down ozone and thereby damage the ozone layer in the stratosphere, causing increased reception on earth of ultraviolet light with e.g. increased risks of skin cancer (malignant melanoma) as a consequence.

Lead**

Lead can be found in picture tubes, display screens, solders and capacitors. Lead damages the nervous system and in higher doses, causes lead poisoning.

The relevant TCO'99 requirement permits the inclusion of lead since no replacement has yet been developed.

* Bio-accumulative is defined as substances which accumulate within living organisms.

** Lead, Cadmium and Mercury are heavy metals which are Bio-accumulative.

For U.S.A, Canada, etc. (rated 100-120 Vac) Only

FCC Declaration of Conformity

We, the Responsible Party EIZO NANAOTECHNOLOGIES INC.
5710 Warland Drive, Cypress, CA 90630
Phone: (562) 431-5011

declare that the product Trade name: EIZO
 Model: FlexScan S2110W

is in conformity with Part 15 of the FCC Rules. Operation of this product is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.

- * Reorient or relocate the receiving antenna.
- * Increase the separation between the equipment and receiver.
- * Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- * Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note
Use the attached specified cable below or EIZO signal cable with this monitor so as to keep interference within the limits of a Class B digital device.

- AC Cord
- Shielded Signal Cable (enclosed)

Canadian Notice

This Class B digital apparatus complies with Canadian ICES-003.
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Hinweis zur Ergonomie:

Dieser Monitor erfüllt die Anforderungen an die Ergonomie nach ISO13406-2 mit dem Videosignal, 1680 Punkte ≥ 1050 Zeilen, RGB analog, 0,7 Vp-p und mindestens 60,0 Hz Bildwiederholfrequenz, non interlaced. Weiterhin wird aus ergonomischen Gründen empfohlen, die Grundfarbe Blau nicht auf dunklem Untergrund zu verwenden (schlechte Erkennbarkeit, Augenbelastung bei zu geringem Zeichenkontrast.)

Hinweise zur Auswahl des richtigen Schwenkarms für Ihren Monitor

Dieser Monitor ist für Bildschirmarbeitsplätze vorgesehen. Wenn nicht der zum Standardzubehör gehörige Schwenkarm verwendet wird, muss statt dessen ein geeigneter anderer Schwenkarm installiert werden. Bei der Auswahl des Schwenkarms sind die nachstehenden Hinweise zu berücksichtigen:

Der Standfuß muß den nachfolgenden Anforderungen entsprechen:

- a) Der Standfuß muß eine ausreichende mechanische Stabilität zur Aufnahme des Gewichtes vom Bildschirmgerät und des spezifizierten Zubehörs besitzen. Das Gewicht des Bildschirmgerätes und des Zubehörs sind in der zugehörigen Bedienungsanleitung angegeben.
- b) Die Befestigung des Standfusses muß derart erfolgen, daß die oberste Zeile der Bildschirmanzeige nicht höher als die Augenhöhe eines Benutzers in sitzender Position ist.
- c) Im Fall eines stehenden Benutzers muß die Befestigung des Bildschirmgerätes derart erfolgen, daß die Höhe der Bildschirmmitte über dem Boden zwischen 135 - 150 cm beträgt.
- d) Der Standfuß muß die Möglichkeit zur Neigung des Bildschirmgerätes besitzen (max. vorwärts: 5° , min. nach hinten $\geq 5^\circ$).
- e) Der Standfuß muß die Möglichkeit zur Drehung des Bildschirmgerätes besitzen (max. $\pm 180^\circ$). Der maximale Kraftaufwand dafür muß weniger als 100 N betragen.
- f) Der Standfuß muß in der Stellung verharren, in die er manuell bewegt wurde.
- g) Der Glanzgrad des Standfusses muß weniger als 20 Glanzeinheiten betragen (seidenmatt).
- h) Der Standfuß mit Bildschirmgerät muß bei einer Neigung von bis zu 10° aus der normalen aufrechten Position kippsicher sein.

"Maschinenlärminformations-Verordnung 3. GPSGV: Der höchste Schalldruckpegel beträgt 70 dB(A) oder weniger gemäss EN ISO 7779"

Recycle Auskunft

Die Rücknahme dieses Produktes nach Nutzungsende übernimmt EIZO in Deutschland zusammen mit dem Partner eds-r gmbh rucknahmesysteme. Dort werden die Geräte in ihre Bestandteile zerlegt, die dann der Wiederverwertung zugeführt werden. Um einen Abholtermin zu vereinbaren und die aktuellen Kosten zu erfahren, benutzen Sie bitte folgende Rufnummer: 02153-73 35 00. Weitere Informationen finden Sie auch unter der Internet-Adresse: www.eizo.de.

Recycling Information for customers in Switzerland:

All recycling information is placed in the SWICO's website.
